

Supplement for “Proof of concept for eliminating *Aedes aegypti* production by means of integrated control including turtles, copepods, tilapia, and larvicides in Monte Verde, Honduras (Gerald G. Marten, Xenia Caballero, Arnulfo Larios, Hilda Bendaña)

Supplement 2: Monte Verde monthly monitoring (original data)

Each row in the monthly monitoring data presented below for October 2016 to March 2019 corresponds to an inspection at an individual house during the designated month. While the original data include family and address information to specify the house for each row, such information about houses is not included in this supplement because of confidentiality concerns.

Only the presence or absence of mosquito larvae or pupae was recorded from October 2016 to June 2018. The actual number of larvae and pupae was recorded starting in July 2018.

The following is an explanation of column labels in the data records:

- House = House number (not shown in this supplement)
- Family = Name of the family living in the house (not shown in this supplement)
- Mujeres embarazadas = Number of pregnant women living in the house
- Status: Reason that a household is not participating in the program, or if participating, has a problem with a control method
- Síndrome febril = Number of household residents with illness having dengue, Zika, or chikungunya symptoms during the previous month
- Quiénes fueron a consulta? = Number of people with dengue, Zika, or chikungunya symptoms who sought medical treatment
- Diagnóstico = Diagnosis for those seeking treatment
- Pila = Number of cement tanks at the house
- Dron = Number of 200-liter drums at the house
- Cisterna = Number of 1000-liter plastic tanks at the house
- Cubeta = Number of 20-liter buckets at the house
- Pozo = Number of wells at the house
- Llantas = Number of wells with tires lining them for structural support
- Positivo = Number of a particular kind of container with mosquito larvae or pupae in the container
- Negativo = Number of a particular kind of container with water but no larvae or pupae in the container
- Seco = Number of a particular kind of container without water (i.e., dry)
- Control = Methods employed by the household to prevent *Aedes aegypti* production in that kind of container
- Larvas = Number of mosquito larvae
- Pupas = Number of mosquito pupae
- Comentarios = Further explanation about anything of significance

While monthly monitoring data continued to be recorded with the same detail during April 2019 to December 2021, only summary data for houses positive for *Aedes aegypti* larvae or pupae are presented for those months in this supplement.

Queries about these data can be directed to the corresponding author: Gerald Marten (gerrymarten@hawaii.rr.com).
